Platform details
Provide platform information that Elastic Beanstalk needs to create an environment.

Platform: Tomcat
Platform branch: Tomcat 11 with Corretto 25 running on 64bit A…
Platform version: 5.14.11 (Recommended)

Application code
Choose how to deploy this application.

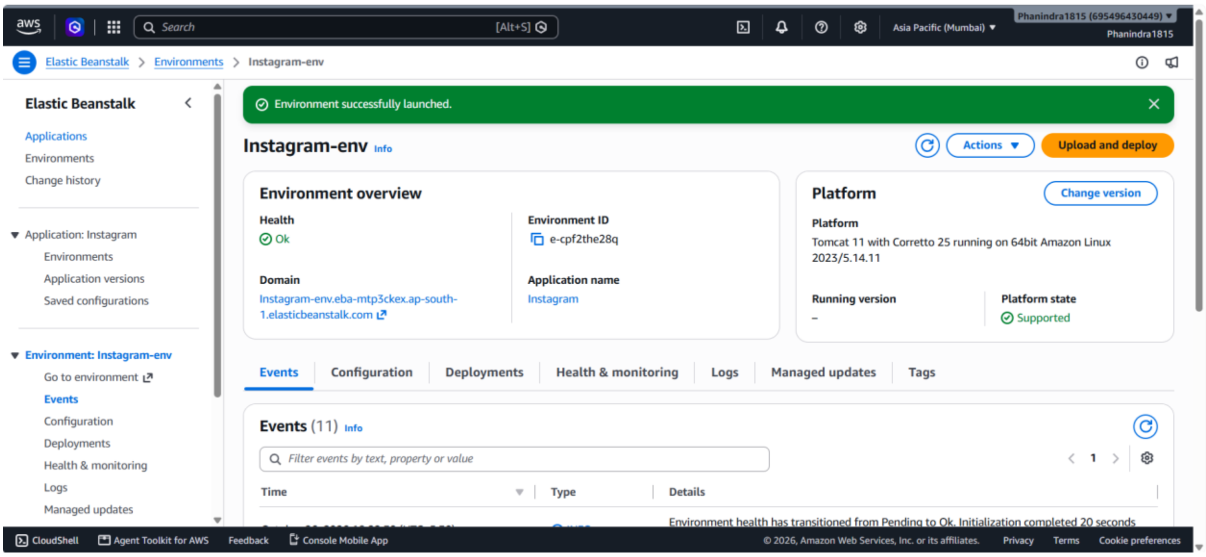
● Sample app — Hello world!
○ Existing version — No versions available for this application.
○ Local file — Upload a file from your local machine.
○ S3 URI — S3 object containing your application code.

Environment properties
Pass environment variables to your application as key-value pairs.

☐ Add environment properties

Environment tier
Choose whether the environment serves HTTP requests or runs background work.

● Web server environment — Run a website, web application, or web API that serves HTTP requests.
○ Worker environment — Run a worker application that processes long-running workloads on demand or performs tasks on a schedule.



Environment successfully launched.

 Amazon Linux 2023 AMI

 This EC2 instance is managed by AWS Elastic Beanstalk. Changes made via SSH
 WILL BE LOST if the instance is replaced by auto-scaling. For more information
 on customizing your Elastic Beanstalk environment, see our documentation here:
 http://docs.aws.amazon.com/elasticbeanstalk/latest/dg/customize-containers-ec2.
