**1. Scenario: Cinema ticket sales are decreasing**

- Descriptive Analysis — What happened? Cinema ticket sales have decreased over the past month.
- Diagnostic Analysis — Why did it happen? Fewer popular movies were released, and more customers are watching movies on OTT platforms.
- Predictive Analysis — What might happen? Ticket sales may continue to decline if customer interest remains low.
- Prescriptive Analysis — What should we do? Introduce special ticket offers, organize movie events, and provide family combo packages to attract customers.

**2. Scenario: Ice cream sales are decreasing**

- Descriptive Analysis — What happened? Ice cream sales have decreased compared to the previous month.
- Diagnostic Analysis — Why did it happen? The weather has become colder, reducing customer demand.
- Predictive Analysis — What might happen? Sales may continue to decline during the winter season.
- Prescriptive Analysis — What should we do? Reduce inventory, avoid overstocking, and introduce seasonal offers.

**3. Scenario: A fitness center is gaining more members**

- Descriptive Analysis — What happened? The number of new gym memberships has increased.
- Diagnostic Analysis — Why did it happen? The gym introduced affordable membership plans and group fitness classes.
- Predictive Analysis — What might happen? Membership numbers and demand for workout sessions may continue to grow.
- Prescriptive Analysis — What should we do? Add more class timings, hire trainers if needed, and maintain equipment to accommodate new members.

**4. Scenario: A restaurant is wasting food**

- Descriptive Analysis — What happened? The restaurant is throwing away large quantities of unsold food every day.
- Diagnostic Analysis — Why did it happen? The restaurant is preparing more food than customers are ordering.

- Predictive Analysis — What might happen? Food waste and operating costs may continue to increase.
- Prescriptive Analysis — What should we do? Prepare food based on historical demand, adjust ingredient purchases, and monitor daily sales.

**5. Scenario: A clothing store is selling fewer winter jackets**

- Descriptive Analysis — What happened? Winter jacket sales are lower than expected.
- Diagnostic Analysis — Why did it happen? The winter season started later than usual, delaying customer purchases.
- Predictive Analysis — What might happen? Sales may increase when temperatures drop, but excess inventory could remain unsold if demand stays low.
- Prescriptive Analysis — What should we do? Avoid large additional orders, run targeted promotions, and adjust stock based on weather and sales trends.
