Task -2 :

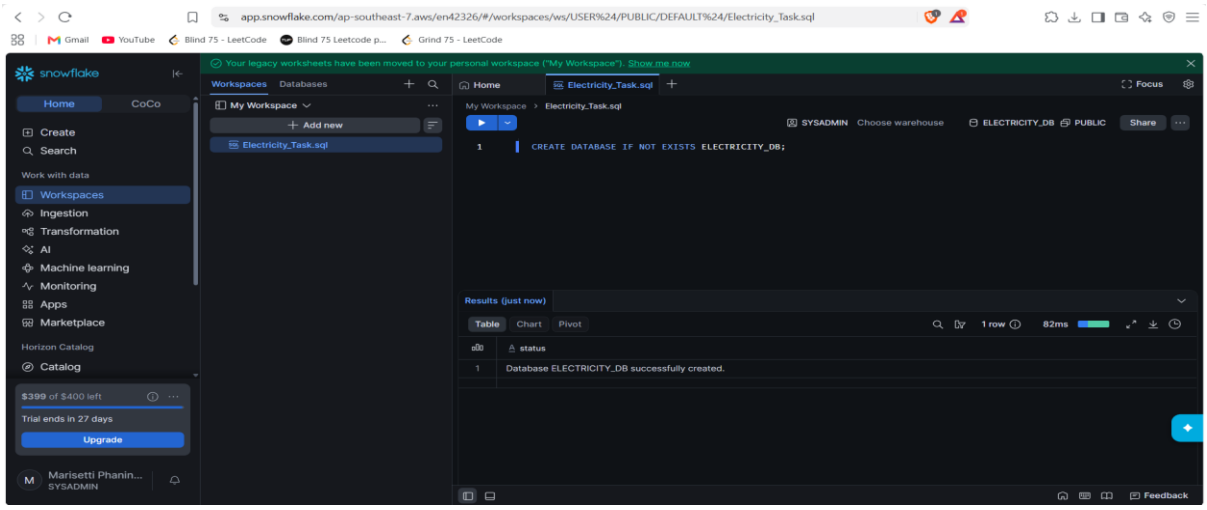

1. Create a snowflake account

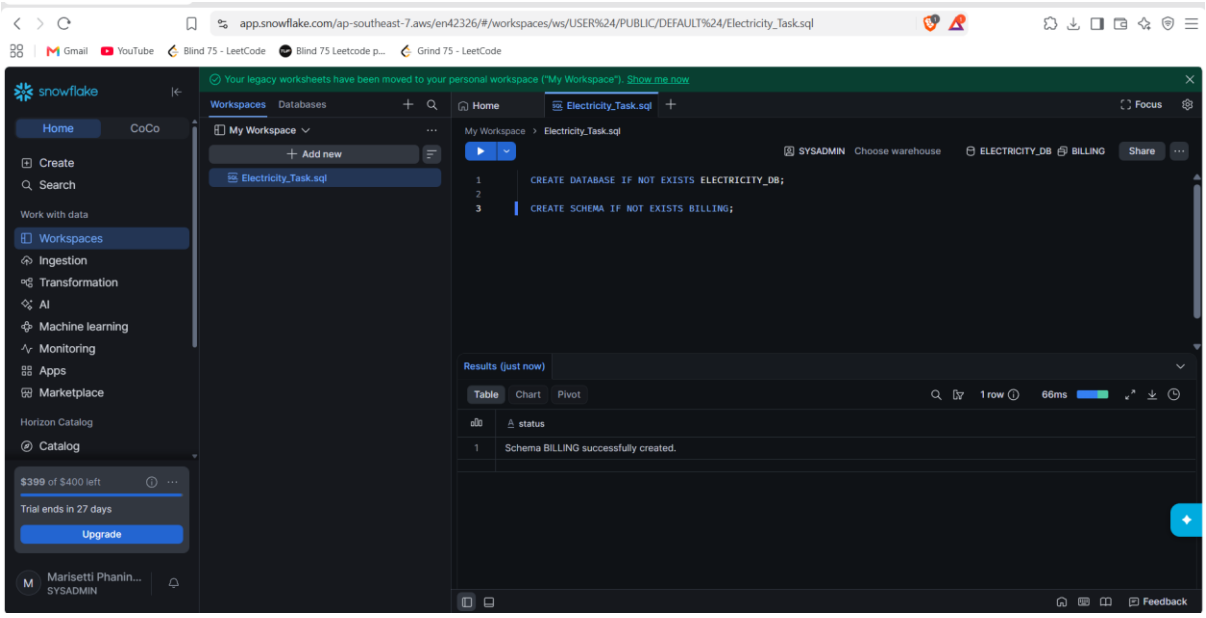

2. Change to sysadmin

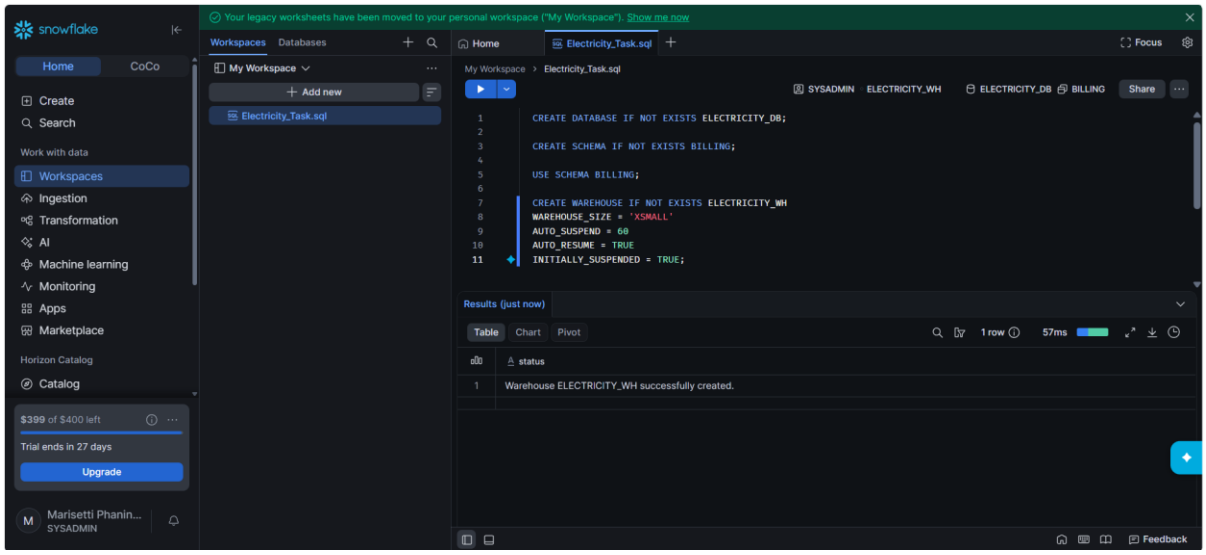

3. Create the database

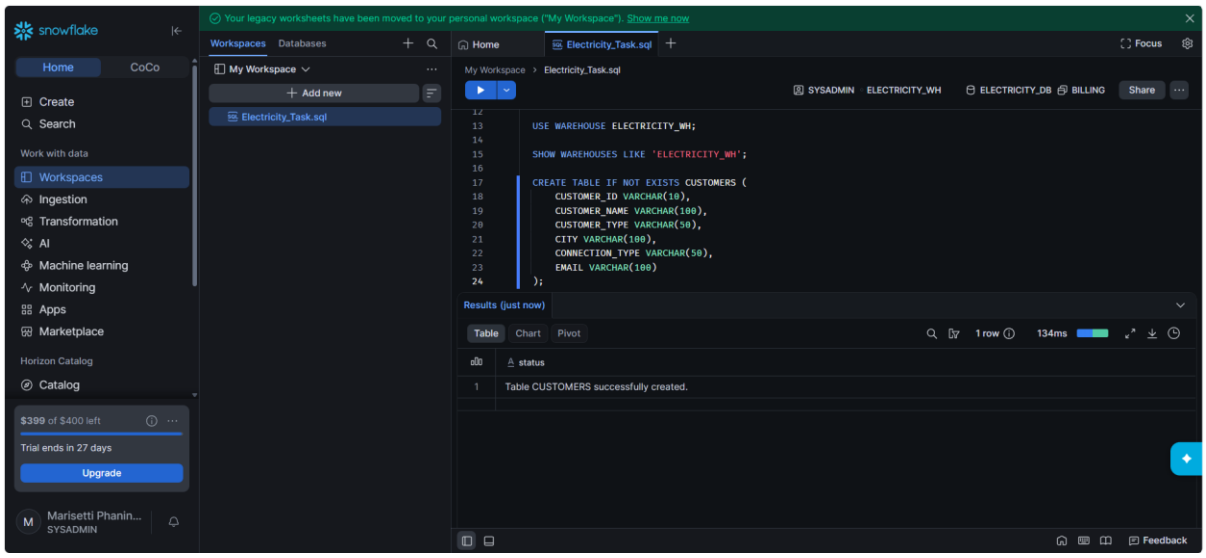

4. Create the schema

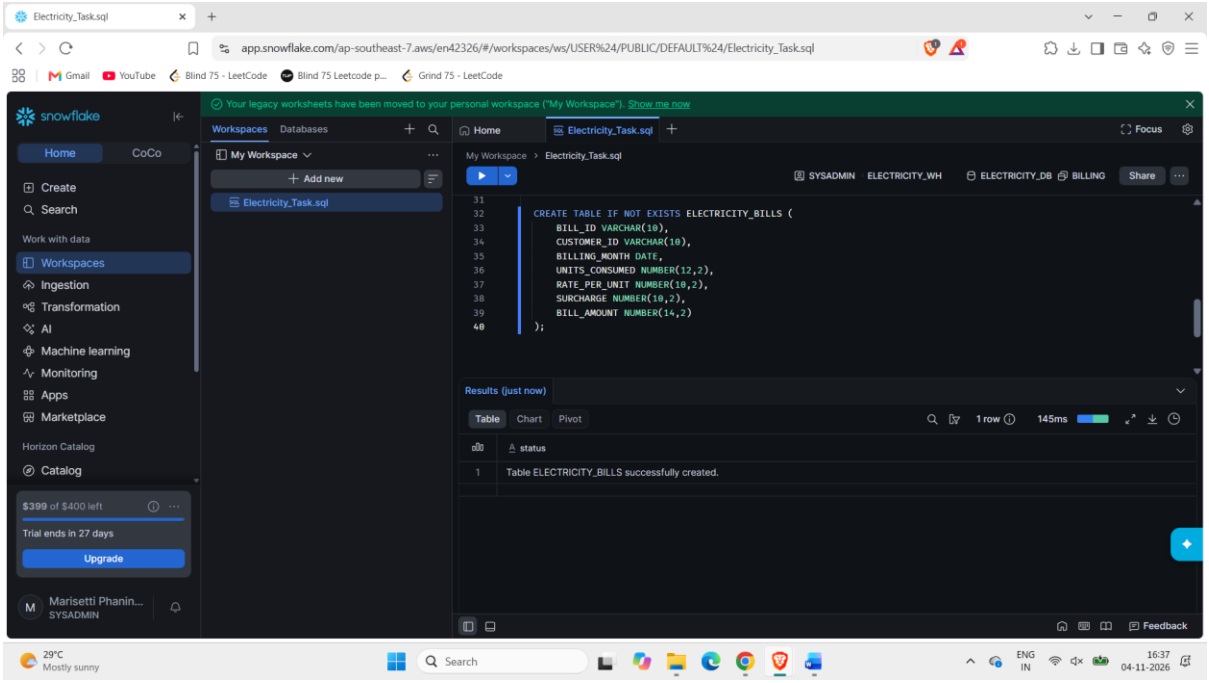

5. Create the warehouse

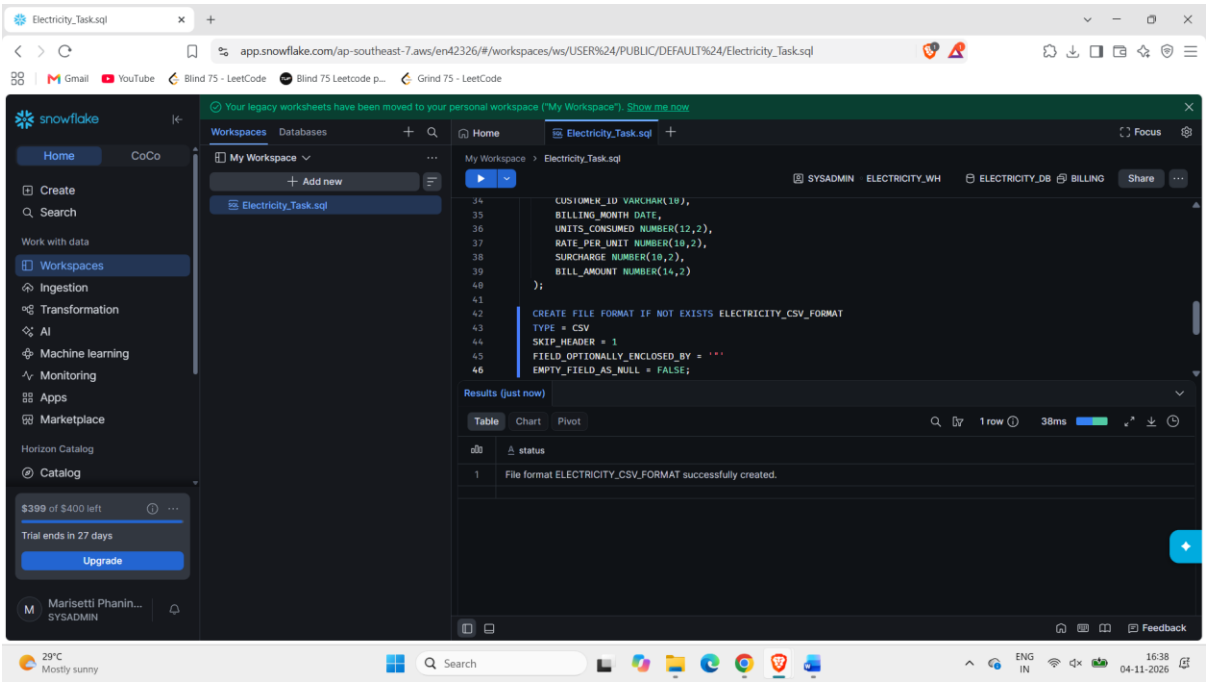

6. Create the CUSTOMERS table

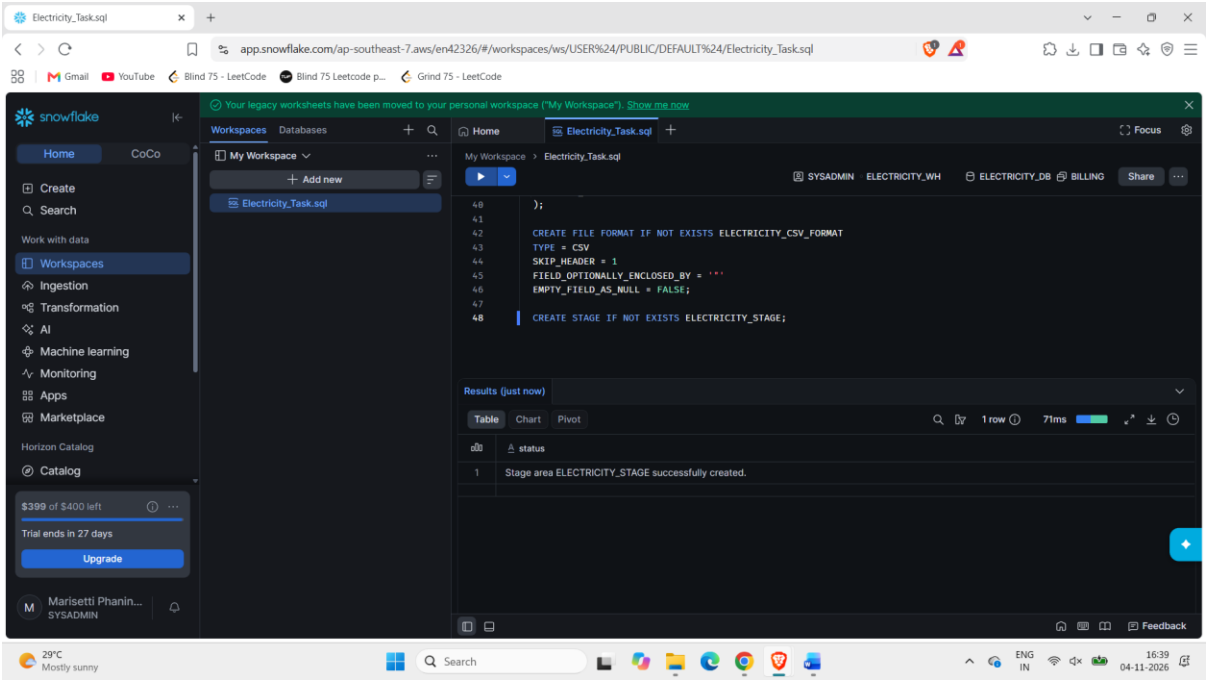

7. Create the ELECTRICITY_BILLS table

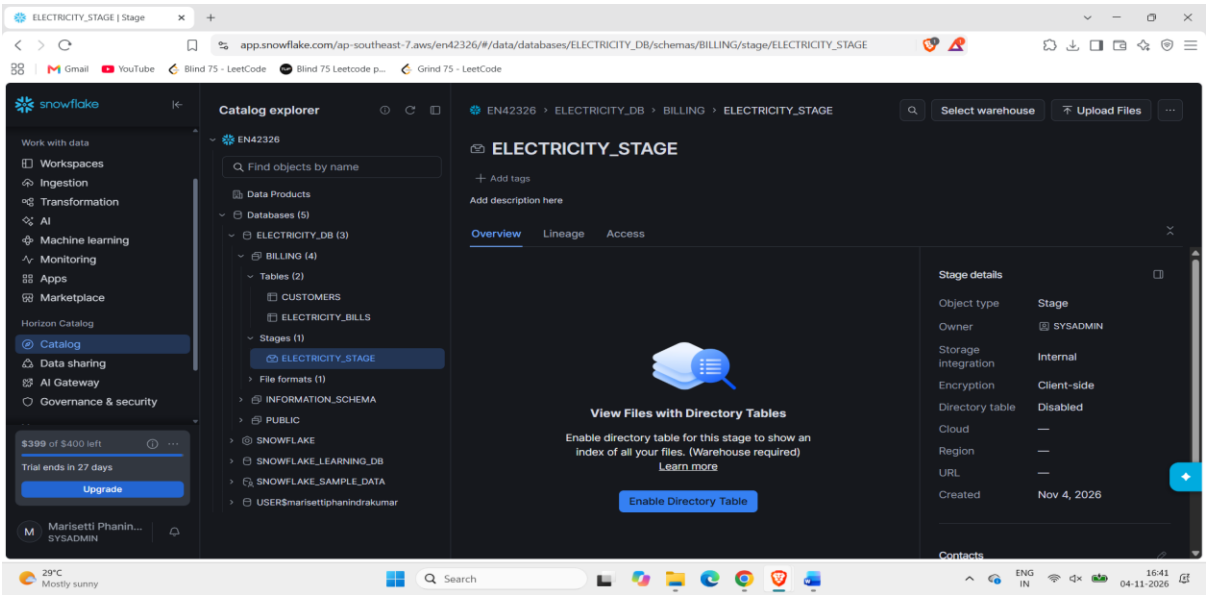

8. Create the CSV file format

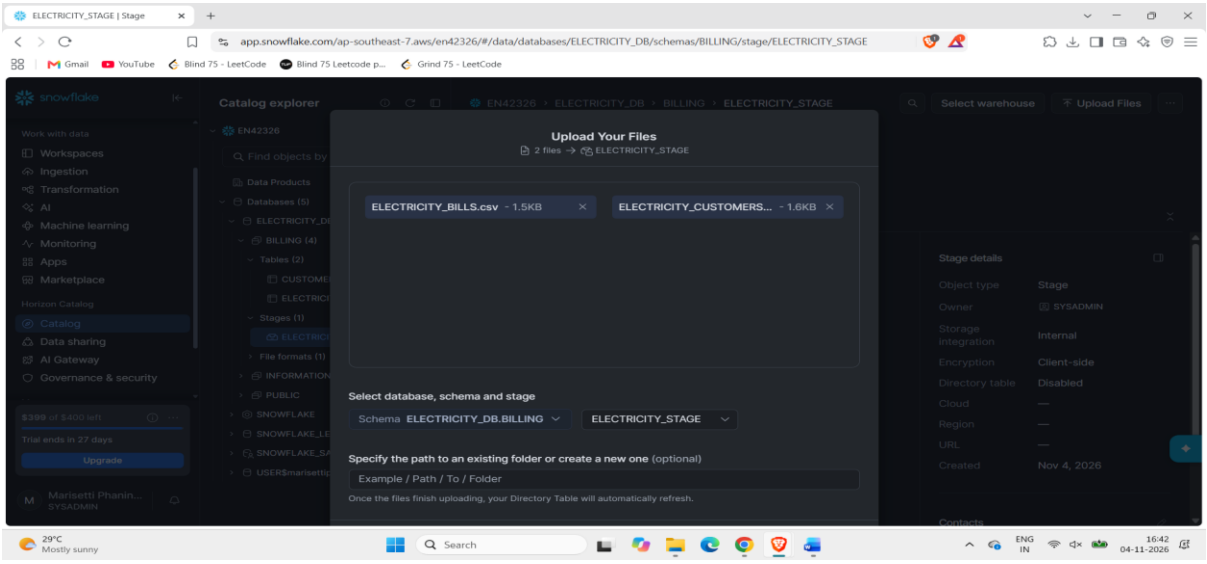

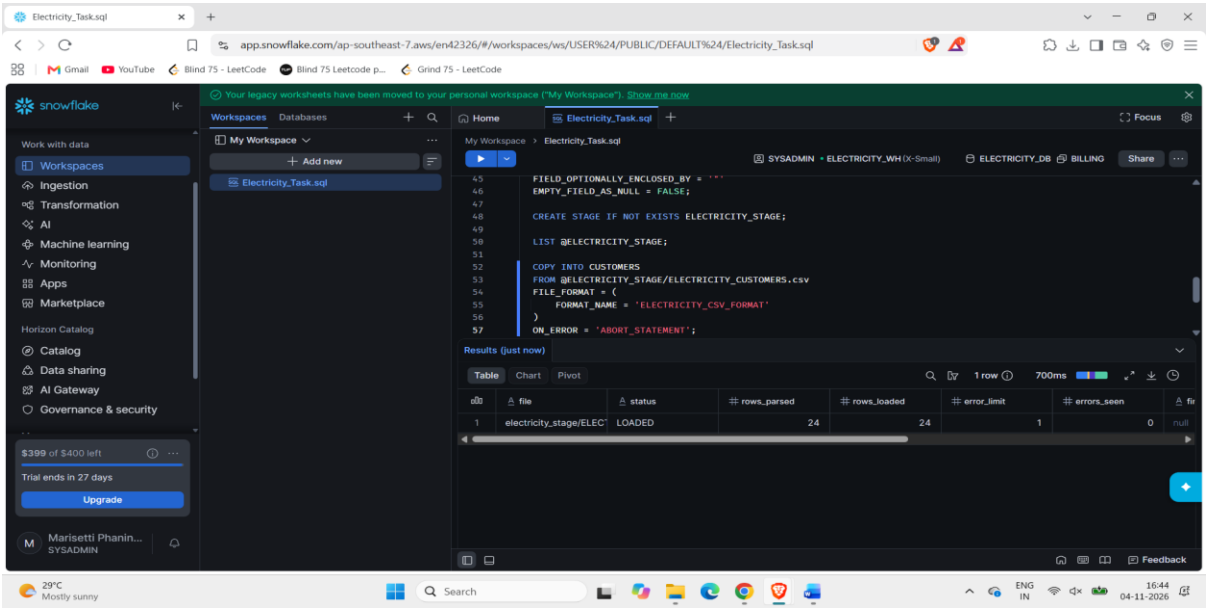

9. Create an internal stage

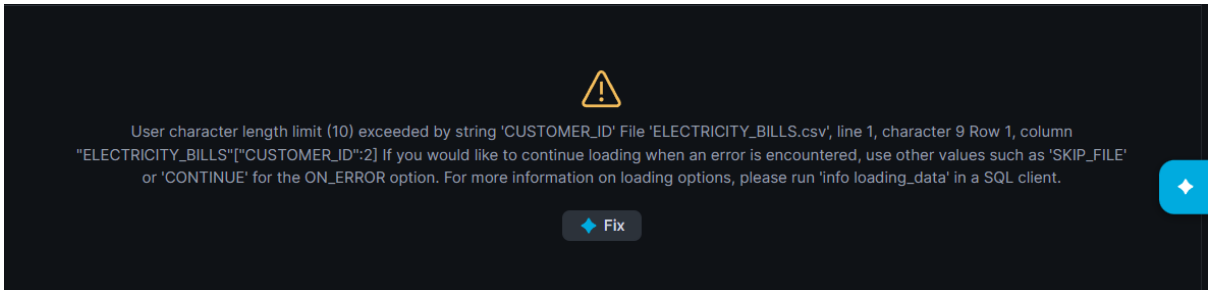

10. Upload the files

Feedback

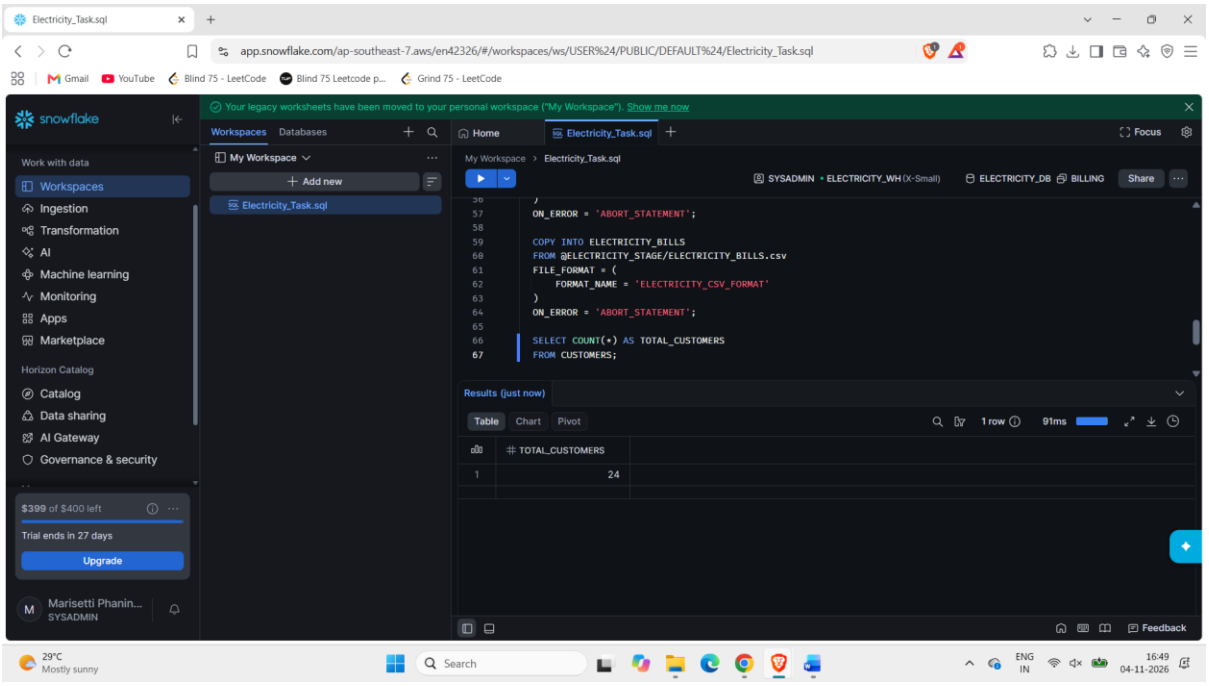

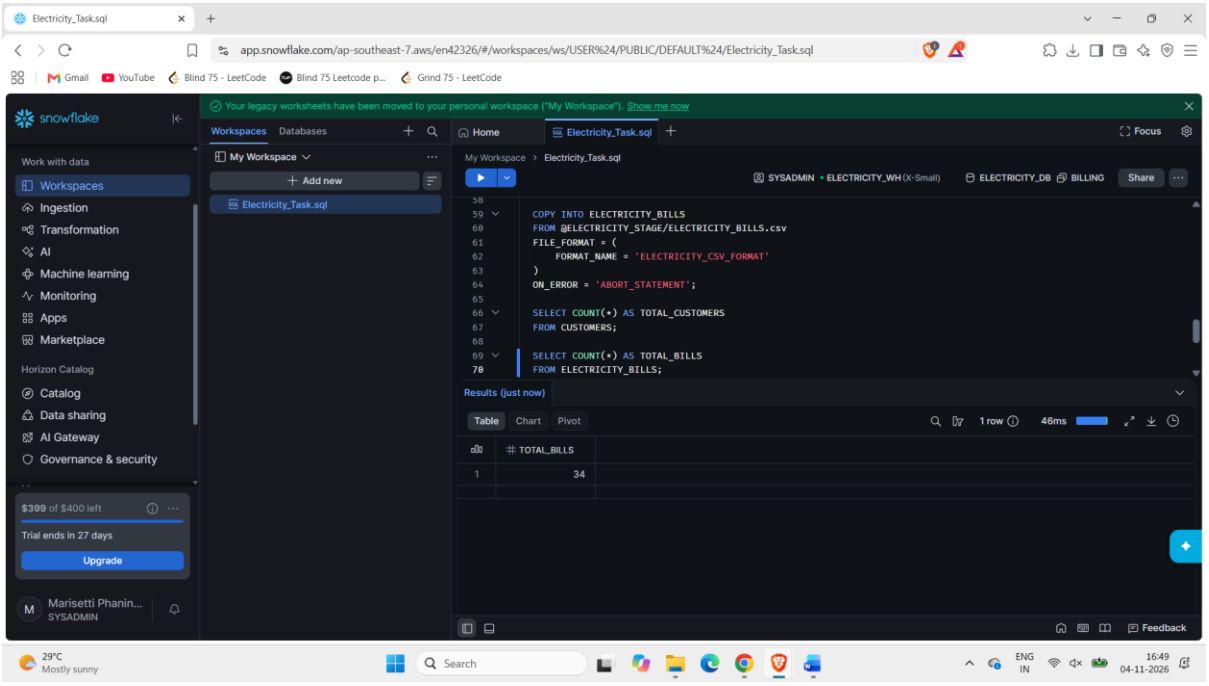

We have uploaded the file without the format as we can see in above for the 1 st one I have given the file format explicitly and for the second one I haven't mentioned any file format so it is showing an error which is expected .

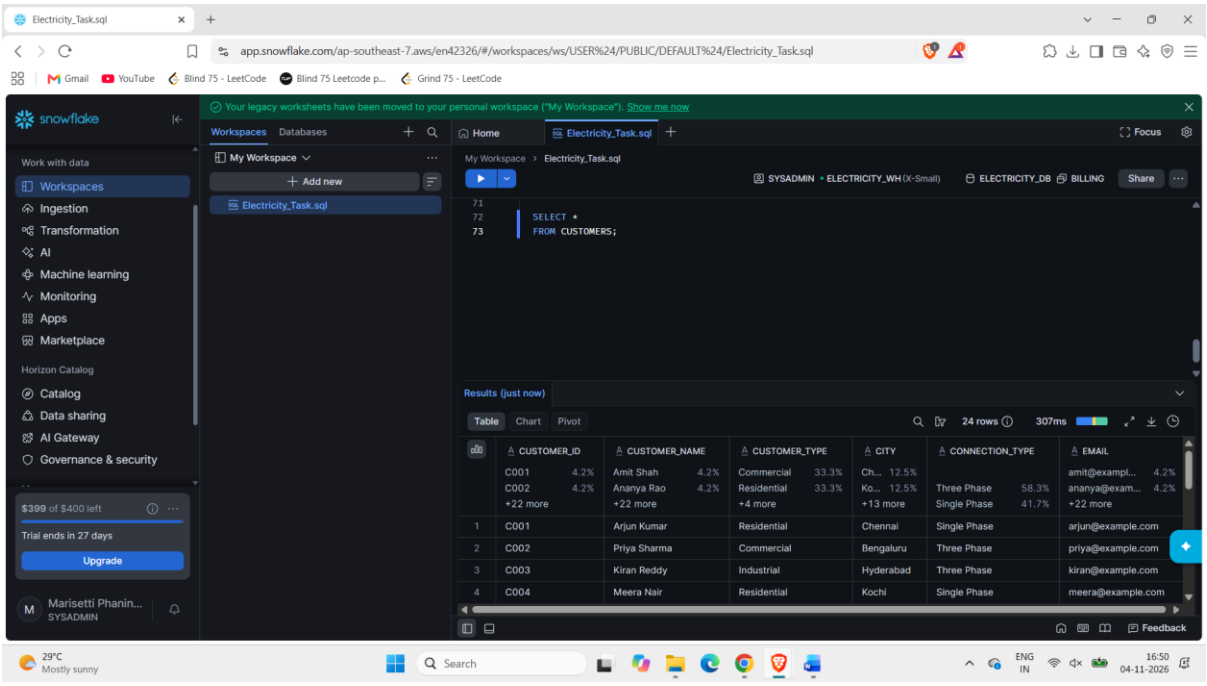

After correcting the File format the second file also git accepted . As we can see the status as LOADED .

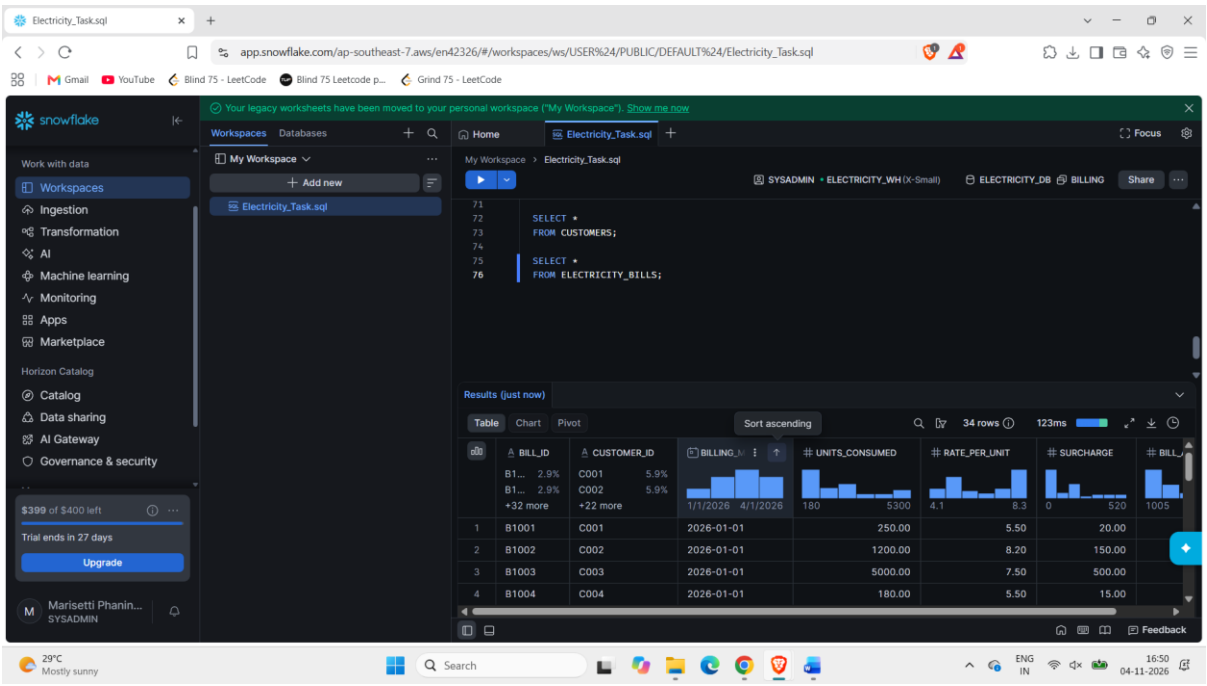

11. Check total records

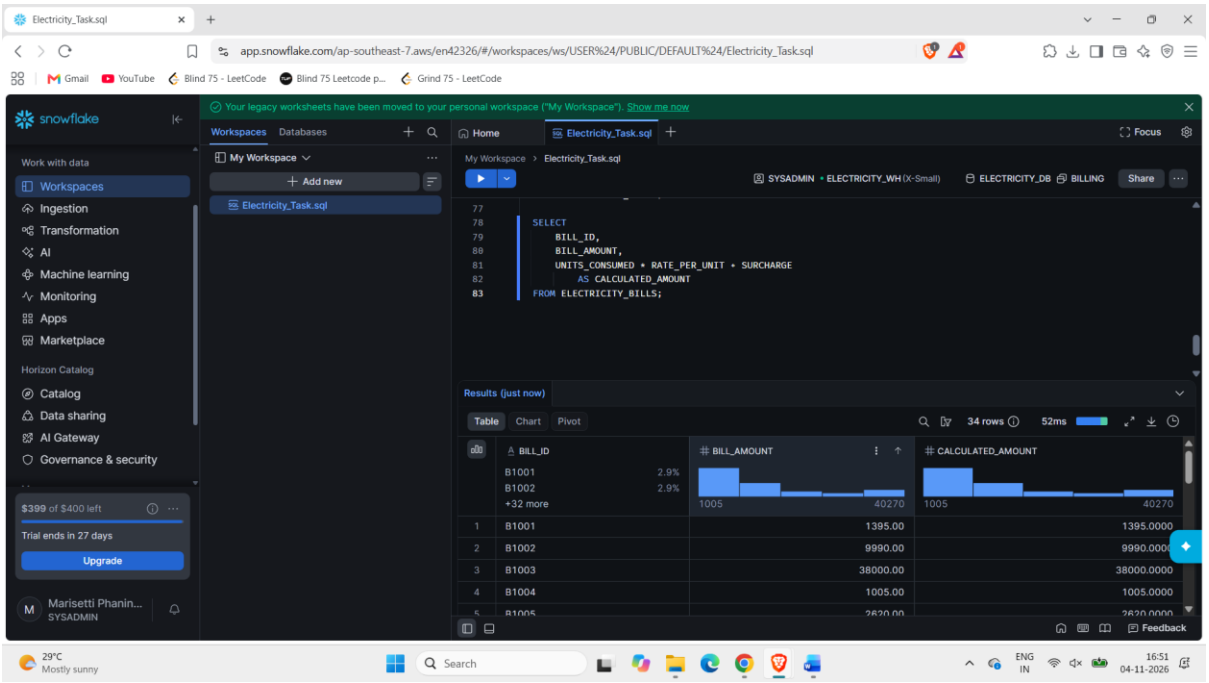

12. Display all records

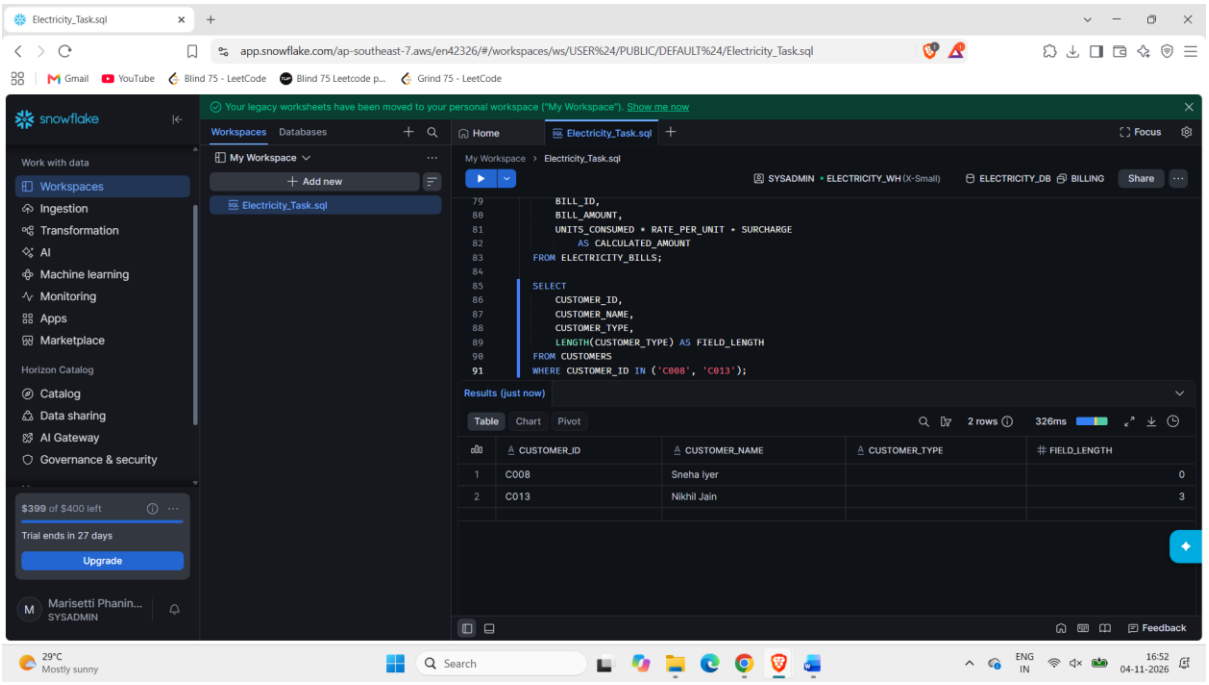

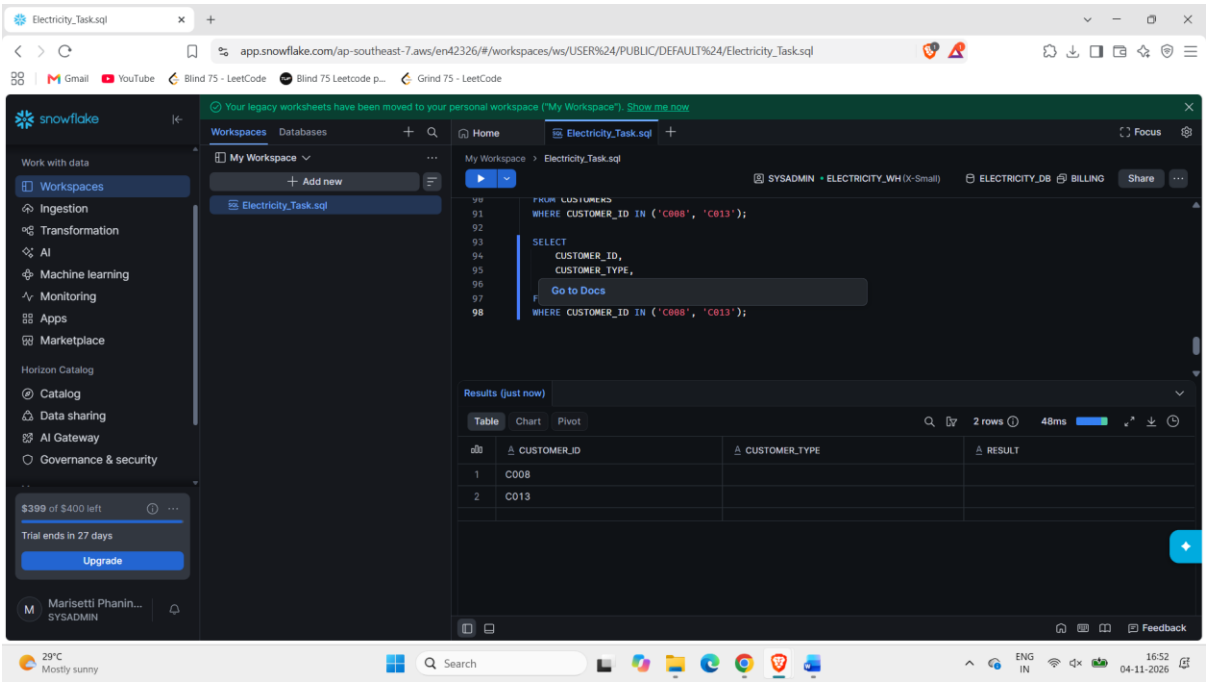

13. Validate the bill calculations

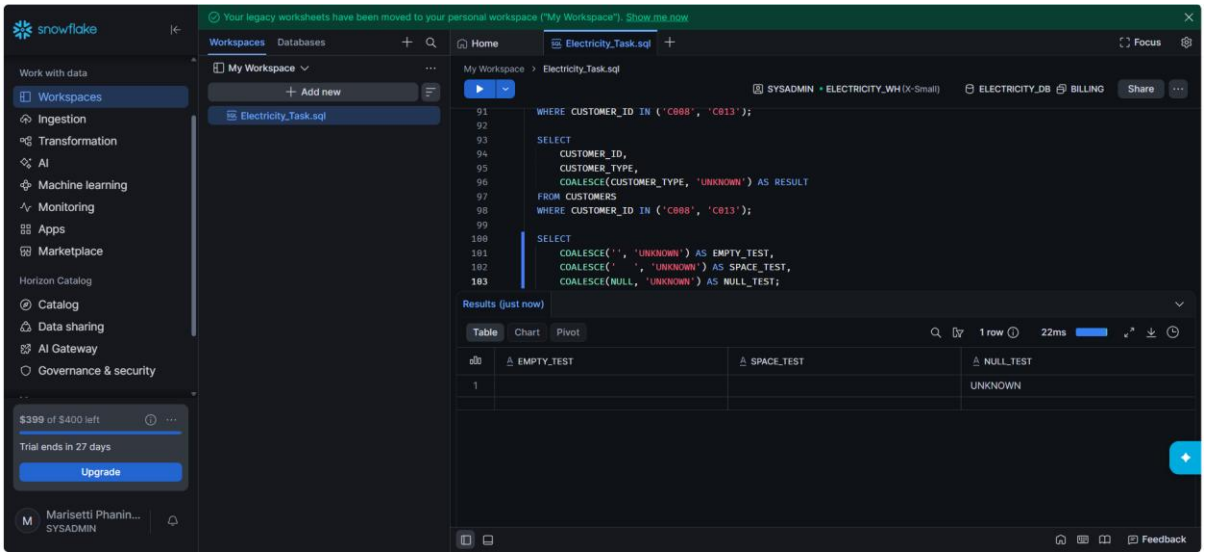

14. Check the empty CUSTOMER_TYPE values

Here I have been testing with 3 spaces and one empty which is null value

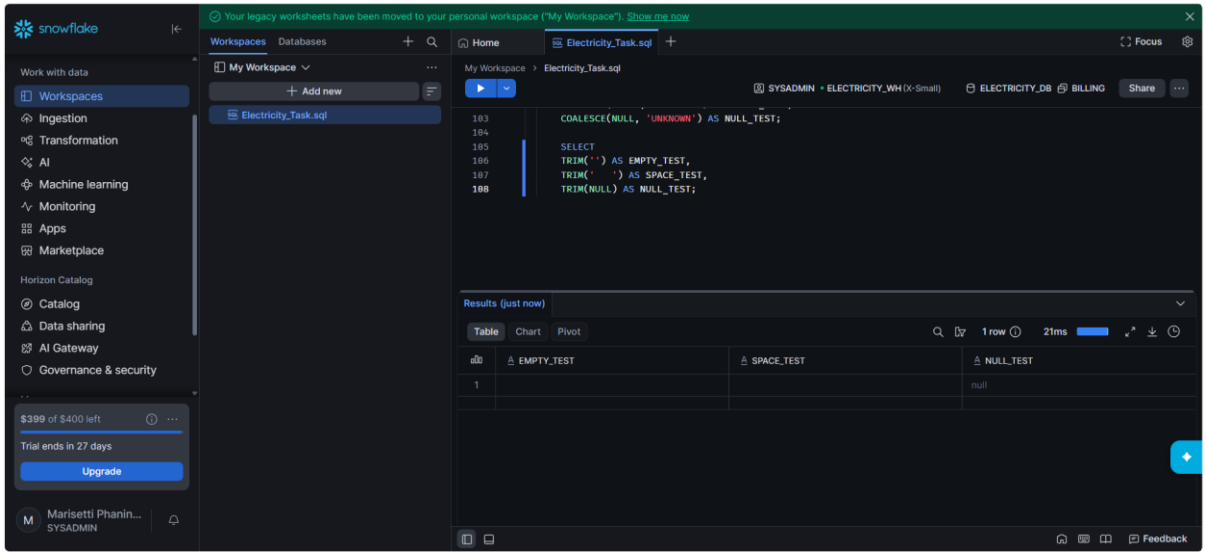

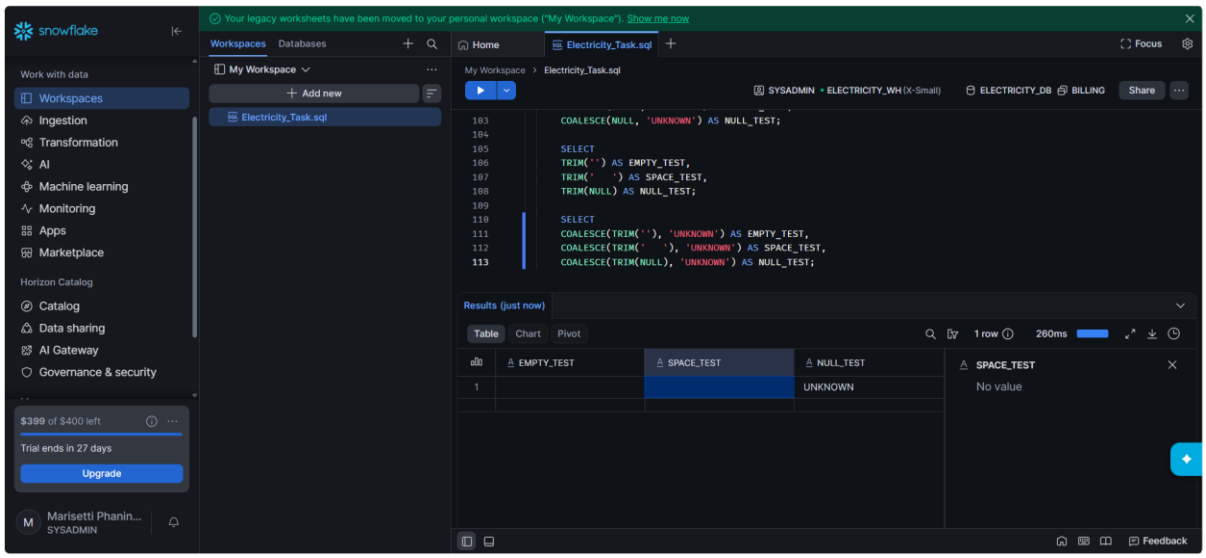

COALESCE only checks where the value is null or not but it doesn’t consider the spaces

Here 1 st one is empty and 2 nd one is space and 3 rd one is null which is shown as unknown

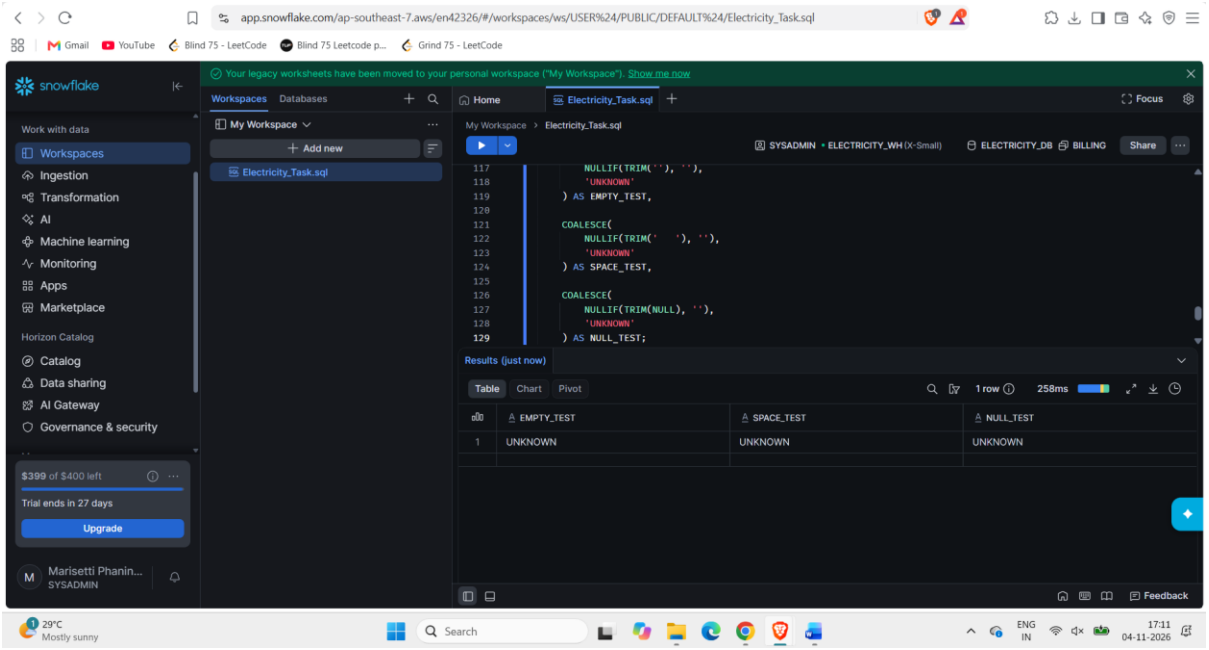

After trimming both the empty and space became as empty i.e space after trimming is empty

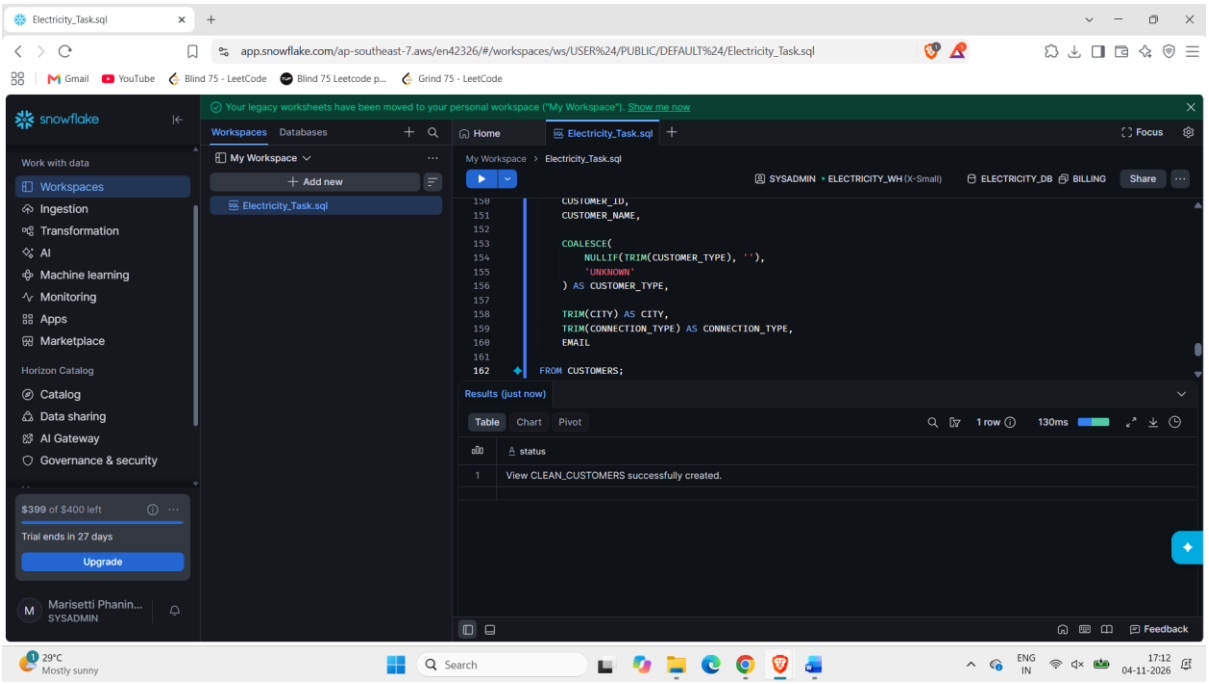

So after trimming if we try coalesce even the space also became null i.e no value

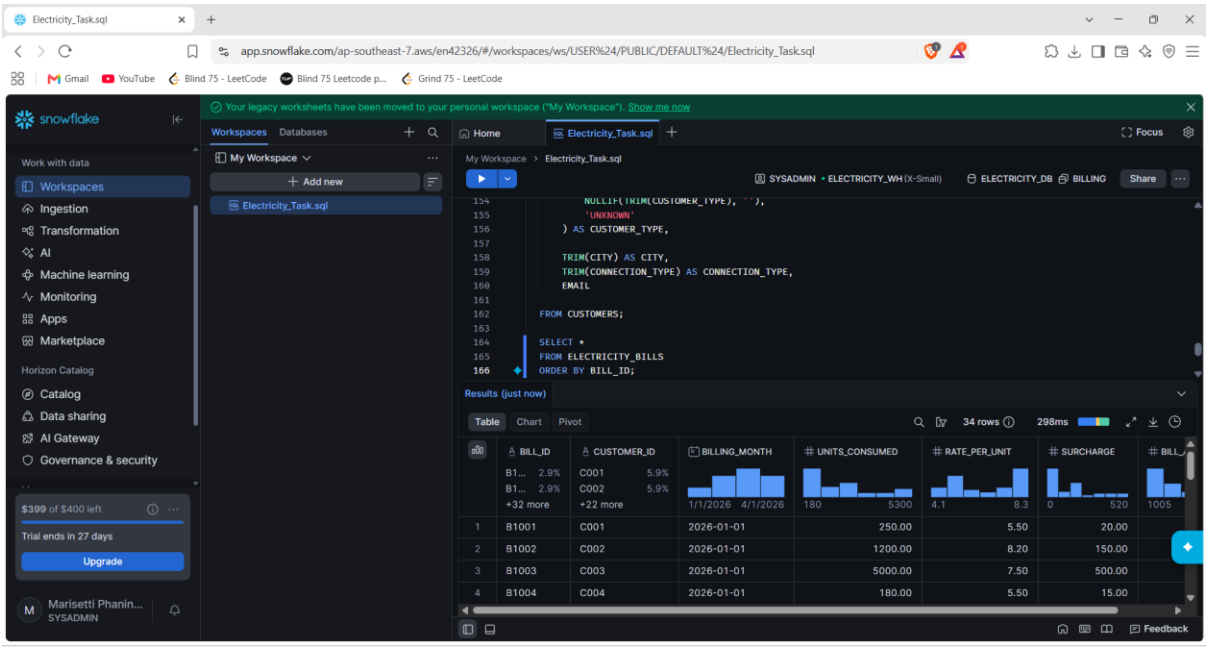

15. Apply TRIM and NULLIF with COALESCE

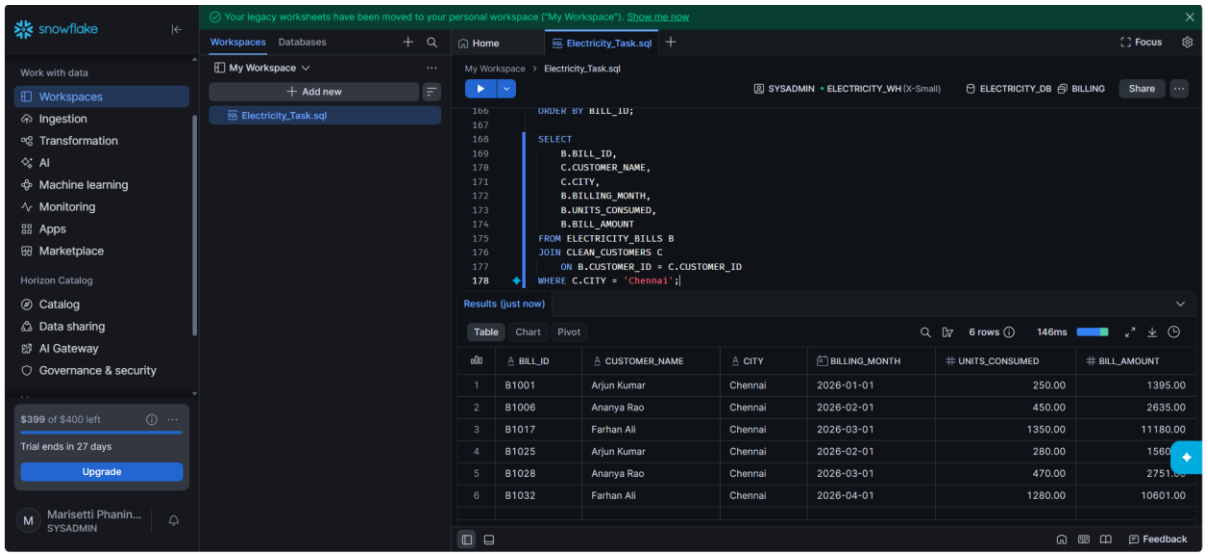

16. Create a transformed Clean Customers table

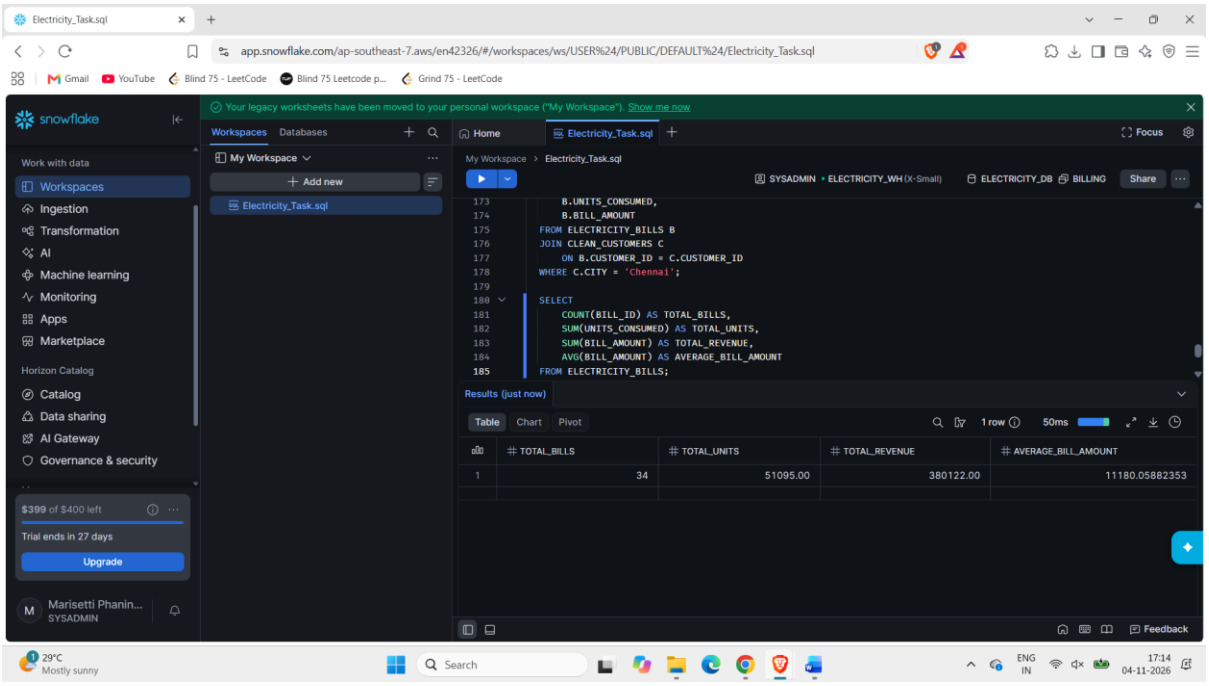

17. Display all electricity bills

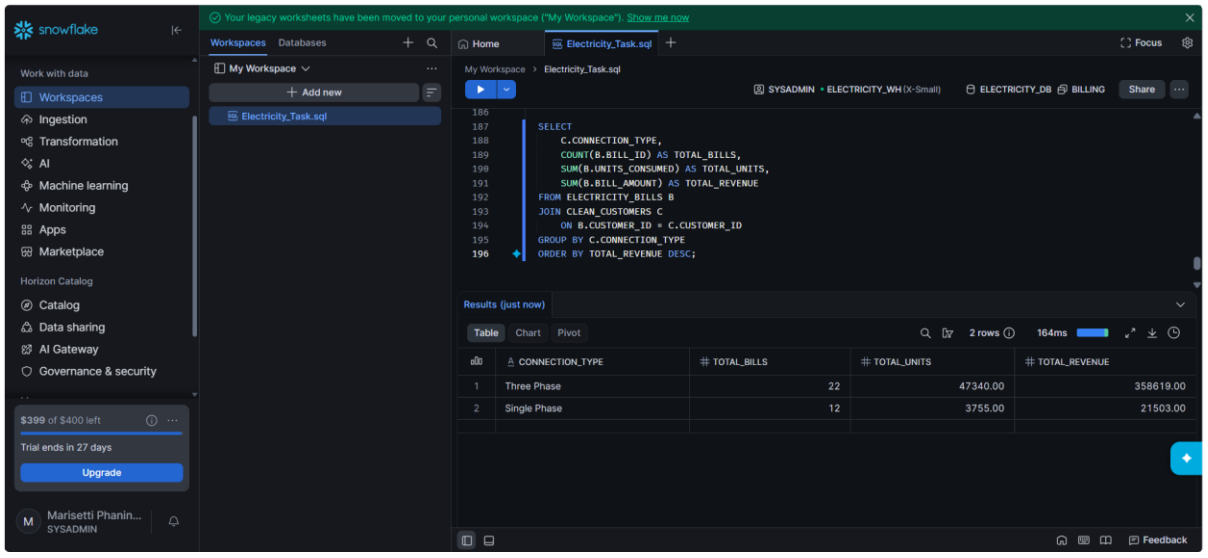

18. Find electricity bills by location

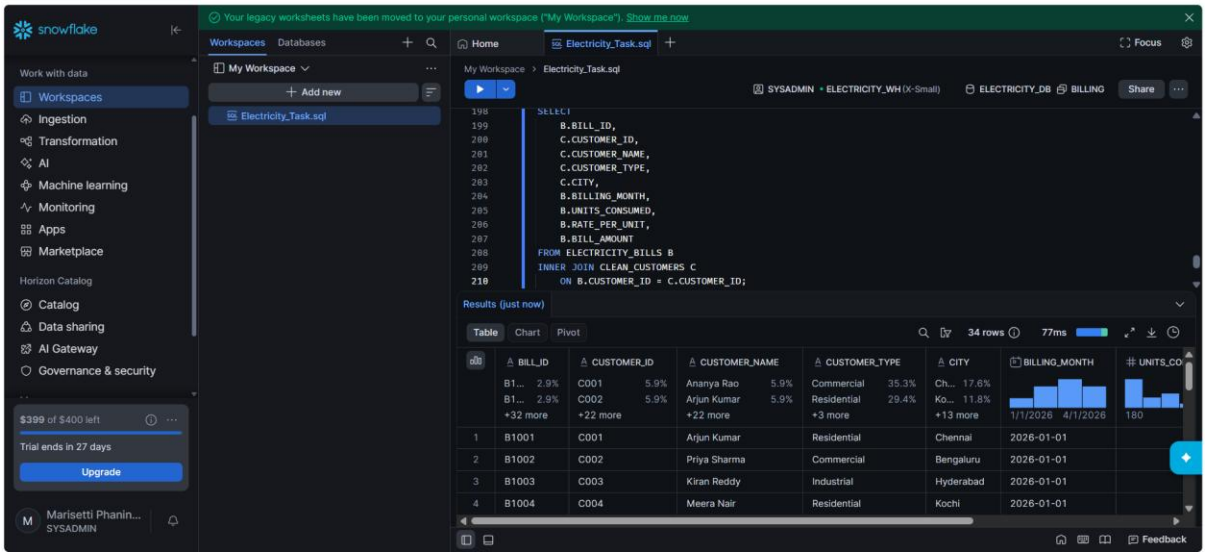

19. Calculate total sales and overall revenue

20. Consumption and revenue by connection type

21. JOIN CUSTOMERS and ELECTRICITY_BILLS

22. Revenue by customer type
